

IN THE CLAIMS

This listing of claims replaces all prior listings.

Listing of Claims:

1. (Currently Amended) An information processing system for distributing content to another device via a network, comprising:

first receiving unit ~~for receiving~~ configured to receive from said another device, via said network, an initial communication of application information that identifies an application via which said content can be accessed, content identifying information and format identifying information;

reading unit ~~for reading~~ configured to retrieve from storage said content based on said content identifying information included in said application information when said application information of said content is received by said first receiving unit;

format converting unit ~~for converting~~ configured to convert said content ~~read~~ retrieved by said reading unit into data in a predetermined format based on said format identifying information included in said application information; and

distributing unit ~~for distributing~~ configured to distribute the data in the predetermined format from said format converting unit to said device via said network.

2. (Currently Amended) A system according to Claim 1, further comprising:

second receiving unit ~~for receiving~~ configured to receive transaction information of said content; and

authenticating unit ~~for authenticating~~ configured to authenticate said transaction information when the transaction information of said content is received by said second receiving unit,

wherein,

said reading unit ~~reads out~~ retrieves said content based on a result authenticated by said authenticating unit.

3. (Original) A system according to Claim 2, wherein said transaction information includes a credit card number or an account number.

4. (Original) A system according to Claim 1, wherein said format identifying information includes information which designates an encoding system and/or encoding rate of said content.

5. (Currently Amended) A system according to Claim 1, further comprising:
calculating unit ~~for calculating~~ configured to calculate a use charge for said content based on said application information which is received by said first receiving unit; and
accounting unit ~~for accounting~~ configured to account said use charge which is calculated by said calculating unit, corresponding to said other device.

6. (Currently Amended) A system according to Claim 1, further comprising:
detecting unit ~~for detecting~~ configured to detect a busy status on said network,
wherein,
said format converting unit converts said content into data in a predetermined format based on said busy status which is detected by said detecting unit.

7. (Currently Amended) An information processing method for distributing a content to another device via a network comprising:
a receiving step of receiving from said another device, via said network, an initial communication of application information that identifies an application via which said content can be accessed, content identifying information and format identifying information;
a reading control step of controlling an operation for ~~reading~~ retrieving said content based on content identifying information included in said application information when the application information of said content is received in said receiving step;
a format converting step of converting said content read in said ~~reading~~ retrieving control step into data in a predetermined format based on format identifying information included in said application information; and
a distributing step of distributing the data in the predetermined format to said device via said network.

8. (Currently Amended) A recording medium having a computer-readable program recorded thereon, said computer-readable program being executable on a processor

of an information processing system for distributing a content to another device via a network,

wherein said program comprises:

a receiving step of receiving from said another device, via said network, an initial communication of application information that identifies an application via which said content can be accessed, content identifying information, and format identifying information;

a reading control step of controlling an operation for ~~reading~~ retrieving said content based on content identifying information included in said application information when the application information of said content is received in said receiving step;

a format converting step of converting said content read in said ~~reading~~ retrieving control step into data in a predetermined format based on said format identifying information included in said application information; and

a distributing step of distributing the data in the predetermined format to said device via said network.
